	Examiner Alexander D Gilman	Art Unit 2833	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE ____ MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 102

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-5 are rejected under 35 U.S.C. 102(e) as being anticipated by Lin.

With regard to claims 1 and 5, Lin (US 6,677,668) discloses an integrated circuit device comprising: package having a plurality of interface pins (380, since term pin refers to pins, solder balls, solder columns and other); and plurality of integrated circuit devices (320, 330) mounted inside the package, wherein:

each integrated circuit device has a plurality of interface ports; at least one interface port being connected to another one of the plurality of integrated circuit devices(Fig. 4a),; at least one of said integrated circuit devices has an interface port connected an interface pin (Fig. 4a,b); and at least one of said integrated circuit devices is packaged in a chip scale package (330).

With regard to claim 2, Lin discloses some of said integrated circuit devices (320) are not in chip scale packages and have been tested at their full operational speed (col. 4, lines 34-37).

With regard to claim 3, Lin discloses at least one of said integrated circuit devices is a network processor (col. 4, lines 28-30) and at least one of said other devices a memory device (inherently).

With regard to claim 4, Lin discloses the interconnections between said devices have different impedances (since the interconnection traces have different trace geometry).
